Duracable Adds Hand Tool Line

#RB70027
PRO 35 Tube Cutter

Duracable Manufacturing is now the proud distributor of Rothenberger® tools. When it comes to plumbing installation or repair, Rothenberger has the solution. Rothenberger hand and power tools are the perfect choice for the professional plumber.

Innovation, quality, and service are the driving forces behind the success of Rothenberger and their mission is to be your choice for pipe tools.

Rothenberger has over 50 years of experience as a market leader of innovative and technologically sophisticated pipe tools and machines. They offer a complete line of pipe wrenches, tube cutters, bending tools, torches, pliers, and press tools. The entire line of tools has a warranty against defects in material and workmanship for the life of the product.

For a complete catalog of Rothenberger tools, please contact your Duracable Account Manager or Customer Service Representative at 877-256-1765.

Reduce Your Trailering Costs

TeleSwivel™
from Williams Innovations

Tired of spending too much time hooking up your trailer jetter or other large equipment to your service vehicles? Roto-Rooter Corporation is now offering a product which can help you save time and money with a fast, easy and safe hitch connection.

Ideally, the typical process for connecting a truck and trailer involves two people (a driver and a guide) who coordinate a series of hand and voice signals to align a fixed ball mount with a trailer coupler. Deviations of as little as one-half inch can require another back-and-forth alignment attempt. Even under these ideal circumstances, a typical connection usually takes five minutes or more.

Unfortunately, circumstances are rarely ideal. Limited visibility, bad weather, and other adverse conditions make connections more difficult and take more time to complete. Often, an individual will have to make the connection unassisted, leading to longer times and greater possibility of equipment damage. The US Army realized the extent of this problem and has included TeleSwivel™ capability in tactical vehicle design requirements for over a decade. The technology developed for those requirements is what is at the core of our commercial product line.

The TeleSwivel™ brand of proximity hitches revolutionizes this process. With a little practice, a driver can single-handedly connect a trailer in a single pass with a TeleSwivel™ hitch. Just get close and the hitch telescopes out from the trailer, and swivels from side to side to create a target zone up to 25 times larger than the fixed ball mount alone. A typical TeleSwivel™ hitch connection is about one minute.

ProClean® Gets New Look and Certification!

ProClean® Drain Care Products recently updated their look by changing the bottle color and adding a new label. We found it important to have a similar look on all our drain care products, so we moved forward with this fresh look during the certification process of our Concentrated Drain Cleaner. We are making this change as we deplete our current stock, so please be patient with us as we move forward with this update.

Not only did ProClean bottles change to blue in color, but the Concentrated Drain Cleaner is now green! We are happy to announce that our ProClean Drain Cleaner has been officially accredited as a “GREEN” product by EcoLogo™. As a certified product, EcoLogo provides assurance that ProClean Drain Cleaner meets stringent environmental standards. The EcoLogo Program also regularly reviews standards to ensure that our product continues to reflect environmental leadership.

Ridgid® microDrain System

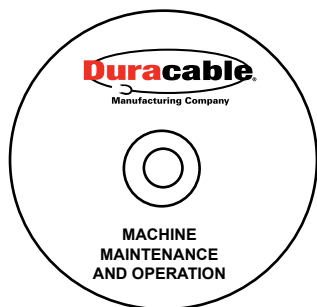

As new RIDGID SeeSnake® products continue to make waves in the market today, RIDGID is pleased to announce the new SeeSnake microDrain™ Inspection System. This product represents a huge leap forward in small diameter drain inspection technology paired with the durability you expect from RIDGID. The microDrain will allow you to quickly inspect places previously unreachable providing true accessibility, increased efficiency and reduced job time.

The microDrain reel enhances the capabilities of our current systems with a small diameter and tight turn radius camera head which allows you to get through many toilet traps and 1-1/4" lines. The lightweight and compact unit allows you to easily stow and carry the system in your truck and onto the job site, providing solutions whenever and wherever you need them. The microDrain can currently travel up to 30' of line.

The microDrain reel is designed to fit your needs no matter what system you currently have. The microDrain reel offers flexible monitor capability by working with the microEXPLORER™ Digital Inspection Camera or any SeeSnake monitor. The microEXPLORER uses both internal memory or an SD card to save still and video images. By combining the microDrain reel with the microEXPLORER Digital Inspection camera, RIDGID provides a complete solution with integrated recording capabilities and image capturing.

Part #	Description
R32928	microDrain/microEXPLORER Inspection System
R32663	microDrain Reel to adapt to a SeeSnake monitor
R33103	microDrain Reel to adapt to a microEXPLORER
R33113	microDrain Interconnect Cable (adapter for a microEXPLORER)
R33108	microDrain Interconnect Cable (adapter for a SeeSnake monitor)

Machine Maintenance & Operation Safety Video

Duracable Manufacturing recently released a new video about Machine Maintenance and Operation of Duracable machines. The DVD features safety tips and suggestions when operating drain cleaning machines. We want to show service technicians the proper techniques when operating and maintaining our machines to ensure the safety of the operator. The video features the DM175, DM55, DM150, DM138 and DM125 machines.

If you would like to request a FREE copy of this DVD, please contact your Account Manager or Customer Service Representative at 877-256-1765. Please refer to part# DMSAFEDVD.

SPITZLIFT™ More Lift...Less Pain!

Duracable Manufacturing announces a new SpitzLift model that lifts up to 500 pounds with a new Lower Price! SPITZLift is a lightweight portable crane that rotates 360 degrees, and can be completely stowed away when more space is needed on the service vehicle's deck. The air craft quality aluminum crane features a DC powered motor (will connect directly to the service vehicle's battery) providing more than enough curb side reach and pick point height to handle any sewer machine that Duracable currently offers, including the Upright. Because this crane is not permanently mounted, it can be shared among a fleet of vehicles provided they have been outfitted with the frame saddle mounting bracket (shown here). The versatility of this crane is the most important aspect of its value. Please visit duracable.com for more information or contact your Duracable Account Manager about this exciting new lifting solution from SpitzLift.
